
JOB DESCRIPTION

Role: Intermediate to Senior .NET Developer
Location: Wellington, New Zealand

Spotlight Reporting is a truly transformational company at the forefront of the exciting and evolving cloud-based software industry. It has exploded onto the market with software that offers advanced reporting, forecasting, and business intelligence to financial advisors, accountants and organisations across the globe.

With offices in Australia, New Zealand, the UK and the US, this award-winning business is looking for a Product Designer in Wellington that has true passion for helping and transforming business outcomes through technology and a desire to get the most out of people.

Position Summary

We're looking for an **Intermediate to Senior Developer** to join our development team.

The primary focus is for someone strong in .NET, to work on backend code, as part of a small, cross functional squad.

Spotlight Reporting is an exciting phase in which we are actively rebuilding many portions of our application to the latest in .NET, AWS and more. This is in addition to the regular, day-to-day work of keeping our existing platform healthy / bug free and continuing to deliver new functionality.

Any skills with front end development, AWS and DevOps would be a huge plus.

Daily Responsibilities

- Writing clean and healthy code .NET but potentially across the entire stack
- Working with the Product Owners and Product Manager in scoping and planning projects.
- Working closely with your team members to release changes iteratively and rapidly.
- Modernising existing interactions in the existing code base and seeking performance wins.
- Exploring code and infrastructure to continuously improve the performance and reliability of our application suite.
- Researching, recommending and implementing best practice approaches for how we code and work.
- Bringing your own ideas and suggestions to enhance, improve and generally make our app awesome.
- Going the extra mile to do things right – no quick and dirty hacks here, just good solid code!

Skills and Qualifications

- Multiple years experience with C#, ASP.NET, Visual Studio, SQL Server
- Bonus: Prior experience working within a front end environment built on React or a similar modern JavaScript framework
- Bonus: any experience with the cloud, especially AWS
- Self-motivation and pragmatism – you love working in a fast-paced environment and understand how to balance competing priorities and understand the benefits of delivering value to end users in an iterative manner
- Excellent communication skills – you will be able to clearly present your ideas and rationale from a remote work setting
- Experience with Git
- Knowledge of OWASP security principles
- Experience with modern CI/CD processes and DevOps
- You must hold a genuine desire to learn fast, work with a talented team but also contribute to our customer's first ways of working.

Please submit both your Cover Letter and CV to ben.chartrand@spotlightreporting.com
